

## F5 DS DIGITAL SIGNAGE

## CONTENT COMMUNICATION SYSTEM

The F5 DS allows you to broadcast content, through monitors and TV sets, with a programmed schedule. Changing contents (playlists) can be done instantly and individually for each monitor or television set. It also allows centralised management of all content and of the entire network of screens. Through this solution it is possible to display Key Performance Indicators (KPI's), internal communications, news, and other content. This way you can turn monitors and televisions into true communication platforms.

## HARDWARE

**Single-Board Computer**

Needed to provide content on each monitor

**Monitors or TV**

Content can be displayed on monitors and/or televisions

**Server**

Server for software installation (SQL Server or MySQL required)

## CONTENTS

**Company Contents**

Institutional Videos | Press Releases | Menu | Birthdays | Events

**External Contents**

Video | News | Meteorology | Website

**Key Performance Indicators**

Dashboards from a BI solution (e.g. Qlik Sense)

## FUNCTIONALITIES

**Configuration**

of network monitors

**Agenda**

customized for each monitor, with a replication option

**Templates**

templates built with different contents

**Playlist**

playlists with different types of content (URL | PDF | YouTube | Image)
